2021-2022 Curriculum Guide for Doctor of Philosophy degree program with a specialization in ENVIRONMENTAL PUBLIC HEALTH

The Doctor of Philosophy (PhD) degree in Environmental Sciences requires a significant program of study and research that qualifies the recipient to conduct independent high-quality research and communicate complex information in environmental public health. Students pursuing the PhD degree complete didactic, laboratory and research courses. In addition, PhD students must successfully complete and pass a PhD Qualifying Exam, a PhD Candidacy Exam, Dissertation and Final Examination. Due to the expanded depth and scope of content and research, it takes a minimum of four years to complete the program requirements to earn the PhD degree. Graduates are prepared for teaching/research faculty positions in higher education and other positions in public and private sectors. This program is part of the Ohio State Environmental Sciences Graduate Program (ESGP).

Students are assigned a faculty advisor who will provide guidance throughout the program. Students are encouraged to get to know their advisor and meet with him/her at least twice each semester. This document serves as a resource to be used by the student and the advisor in planning a program with a specialization in EPH, but is not inclusive of all important degree, college(s), and university requirements. All students are expected to be familiar with the ESGP Handbook https://esgp.osu.edu/sites/esgp.osu.edu/files/esgp-handbook-text-fnal-revision-ss-gb-updated-final-2014.12.2.pdf, the College of Public Health (CPH) Graduate Student Handbook: http://cph.osu.edu/students/graduate/handbooks, the Graduate School Handbook http://www.gradsch.ohio-state.edu/ and CPH competencies: http://go.osu.edu/cphcompetencies.

PROGRAM OF STUDY

The PhD-Environmental Public Health curriculum consists of a minimum of 81 credits.

**ESGP Required Courses (21 credits)**

**Electives (9 credits)**

With advisor’s guidance and approval, select from list of approved ESGP courses in Appendix II and/or from list of CPH-EPH course in Appendix I.

*****Questions regarding the student’s program of study should be directed to their advisor*****
**Dissertation Research (27 credits)**

Pre-Candidacy and Post-Candidacy Research Hours (8998 and 8999) are to be taken in the advisor’s home department/division

**Grade Policy:**
In addition to the general Graduate School requirements of a cumulative grade point average of 3.0 or higher, students must meet specific college policies regarding grades in courses.

**Support Staff:**

Appendix II ESGP Core Courses in Biological Science

The objective of this core course area is to ensure that students are familiar with the diversity and functioning of organisms and the interactions among species and between organisms and the environment. Because the environmental sciences focus on the relationships between living organisms and their environment, the basic principles of ecology and a solid understanding of ecosystems structure and function is the focus of the ESGP core. This understanding can be gained through coursework that focuses on a particular taxon or a particular kind of ecosystem but must be broadly applicable to any environment.

Appendix II ESGP Core Courses in Physical Science and Engineering

The objective of this core area is to provide an understanding of physical structure and processes in which ecosystems must function. Physical structure includes soil, water, air, geological media, climate, nutrients, and contaminants. Physical science processes include movement of “abiotic” matter and energy through ecosystems. Core courses must (1) study fundamental physical, hydrological, chemical, or biogeochemical processes and (2) study and emphasize the effects of physical structure and processes on ecosystem biotic components and function and the interactions between the biotic and abiotic components of the ecosystem.

Appendix II ESGP Core Courses in Social Sciences and Policy

The objective of the social science core is to provide an understanding of concepts related to the study of human society and/or individuals and their relationships to the structure and function of the ecosystem(s) of which they are a part. Methodology includes a range of approaches, both qualitative and quantitative. Core social science courses must engage social science in a combined theoretical and/or applied study of a physical, cultural, regulatory, or economic relationship between humans and the natural and physical environment.
